

**INDIAN SCHOOL DARSAIT
PAPER PENCIL TEST - EVALUATION II
FEBRUARY 2017
ENGLISH**

Grade: IV Div:

Max Marks :25

Date : 28-02-2017

Time: 1 hour

Name:

Roll No:

General Instructions:

- i. All the Questions are compulsory.
- ii. Answer all questions in a separate paper.

Section – A (Unseen Comprehension)

I. Read this passage and answer the questions that follow: (3 marks)

Rainbows are often seen when the sun comes out after or during a rainstorm. Rainbows are caused when sunlight shines through drops of water in the sky at specific angles. When white sunlight enters a raindrop, it exits the raindrop a different colour. When light exits lots of different raindrops at different angles, it produces the red, orange, yellow, green, blue, indigo, and violet that you see in a rainbow. Together, these colours are known as the spectrum. These colours can sometimes be seen in waterfalls and fountains as well.

Did you know that there are double rainbows? In a double rainbow, light reflects twice inside water droplets and forms two arcs. In most double rainbows, the colours of the top arc are opposite from those in the bottom arc. In other words, the order of colours starts with purple on top and ends with the red on bottom. In addition, rainbows sometimes appear as white arcs at night. These rainbows are called moonbows and are so rare that very few people will ever see one. Moonbows are caused by moonlight (rather than sunlight) shining through drops of water.

1. When do we see rainbows? (½)
2. Where else do we see the rainbow colours other than in the sky? (½)
3. How are double rainbows formed? (1)
4. State whether true or false: (½ x 2 = 1)
 - a Moonbows are caused by sunlight shining through drops of water.
 - b All the colours of the rainbow together is known as the spectrum.
